

# DesiMax®

## Desiccant Labels

### Advantages

- Adhesive-backed to allow positive placement within your package
- Made to eliminate potential co-mingling with products
- Dust-free
- Easily applied with high-speed dispensing equipment
- Designed to fit easily into your packaging and can be custom printed with your company graphics, promotional copy, instructions, etc
- Supported by a Type III Drug Master File

### Applications

- Cap Liners
- In-Vitro Diagnostic kit packaging
- Transdermal pharmaceutical delivery system packaging
- Foil pouch packaging
- Products packaged in powder form
- Static Control pouches and bags

### DesiMax® Desiccant Labels

Now you can protect your product packaging against moisture damage with DesiMax, the world's first and only moisture adsorbing label. DesiMax labels feature an ultra-thin, low profile design that makes them seemingly invisible. They require little space and are easily adapted to your packaging either in a free-floating or pressure-sensitive label format.

The DesiMax desiccant label offers the solution to low level humidity-related problems in a wide variety of packaging applications and is ideal for use in the packaging of pharmaceuticals, diagnostic test kits, medical products and electronics.

### Maximum Versatility for Protection Against Moisture

The flat, flexible format of DesiMax makes it one of the most unique desiccants available. In its typical form, DesiMax is a square, flat label. It can be made into any shape to meet your manufacturing needs and package limitations. No matter what shape or form, DesiMax can be adhesive-backed with a number of adhesive systems for specific applications. Dust-free and supported by a Type III Drug Master File, DesiMax can be affixed, attached or incorporated onto the packaging material so it won't co-mingle with the product

### Typical Construction of a DesiMax Label.
